PROFESSIONAL EXPERIENCE

UI Health | Web Developer | Chicago, IL, USA

Sept 2025 – present

- **Business Overview:** Manages healthcare and academic operations that depend on faculty, residency, scheduling, and departmental data remaining accurate and synchronized across internal systems and public-facing platforms.
- **Responsibilities:**
 - Contributing to a Node.js-based synchronization workflow that pulls faculty, residency, and scheduling data through REST APIs to validate records, detect inconsistencies, and reduce fragmented manual updates across disconnected healthcare systems.
 - Modernizing legacy scheduling, faculty management, residency, and academic event workflows into React-based applications using specification-driven development while improving accessibility, WCAG compliance, reusable component architecture, and cross-browser reliability.
 - Improving rendering performance and operational reliability using reusable hooks, state optimization, memoization, debounced search/filter workflows, lazy loading, and recovery handling for inconsistent API responses.
 - Built Chart.js dashboards and reusable workflow components enabling departments to monitor scheduling conflicts, residency coverage, and faculty operations.
- **Technologies:** Node.js, JavaScript, REST APIs, Chart.js, GitHub Copilot, Figma, WCAG, CMS, Lazy Loading, Memoization, State Optimization

LPS Health | Frontend & Workflow Lead | Internship | Chicago, IL, USA

May 2025 – Aug 2025

- **Business Overview:** A cardiovascular health & wellness platform focused on preventive care, educational content, community engagement, and donations.
- **Responsibilities:**
 - Replaced a legacy frontend system with a modern React architecture, redesigning registration, educational, and donation workflows into centralized production-ready user experiences within a 3-month timeline.
 - Improved Lighthouse accessibility score from 40 to 80 and reduced page load time by 70% using lazy loading, image optimization, frontend caching strategies, debounced form handling, state optimization, and accessibility-focused redesign decisions.
 - Built secure Stripe Checkout workflows with validation, session management, payment recovery handling, and rate-limiting safeguards to improve donation reliability and prevent invalid transaction states.
 - Used Google Analytics insights to redesign registration and donation flows, improving workflow completion, engagement, SEO visibility, and frontend usability.
- **Technologies:** React, Tailwind CSS, JavaScript, Stripe API, Google Analytics, GitHub, Netlify, Lazy Loading, Lighthouse

Oracle | Cloud Analyst (Frontend Developer - Oracle Fusion Cloud) | Bengaluru, Karnataka, India

Aug 2022 – June 2024

- **Business Overview:** Oracle Fusion Cloud builds enterprise applications that support large-scale business operations. Contributed to two products for Berkshire Hathaway Energy: BHE-HCM (HR platform for payroll, scheduling, employee records, and absence management) and BHE-CX Services (operations platform for field service, work orders, asset maintenance, and inspections), requiring reliable, high-availability systems for critical business workflows.
- **Responsibilities:**
 - Built Redwood-style enterprise interfaces in Oracle Visual Builder Studio for BHE-HCM and BHE-CX workflows including payroll approvals, employee scheduling, absence management, work orders, inspections, and asset-maintenance operations using Oracle Fusion REST APIs.
 - Developed reusable frontend components for HCM and CX modules that were extensively used across enterprise teams for employee records, scheduling systems, approval workflows, inspection forms, and operational dashboards.
 - Engineered API integration layers with structured validation, RBAC-aware handling and secure REST interactions across distributed Oracle Fusion modules.
 - Collaborated with backend and QA teams during Agile Scrum release cycles to debug cross-module workflow failures and resolve 100+ production issues across frontend and API layers, improving reliability and operational stability.
- **Technologies:** Oracle VBS/VBCS, Redwood, JavaScript, HTML, CSS, REST APIs, Oracle Fusion Cloud, Agile Scrum

EDUCATION

University of Illinois at Chicago | Master's in Computer Science, Chicago, IL, USA

Aug 2024 – May 2026

Software Engineering, Secure Web App Development, UI Designing, HCI, Distributed Systems

3.83 GPA

BNM Institute of Education | Bachelor's in Computer Science, Bengaluru, India

Aug 2018 – July 2022

OOPS, DBMS, Computer Architecture, Computer Organization, Data Structures and Algorithms

3.71 GPA

PROJECT AND RESEARCH

Cue - Collaborative Music Rehearsal Platform | University of Illinois at Chicago | [Live Project](#) | [Github Repo](#)

- **Overview:** As a professional singer who has navigated rehearsal coordination firsthand, built a role-based platform to replace the spreadsheets and group chats music ensembles rely on - to reduce coordination errors and cutting rehearsal downtime.
- **Responsibilities:**
 - Conducted user interviews to identify coordination gaps before designing wireframes and high-fidelity Figma prototypes following HCI principles.
 - Built a React-based platform using spec-driven development, structured state management, and role-aware workflows for singers, musicians, and coordinators.
 - Integrated Socket.IO and REST APIs to synchronize rehearsal assignments, schedule updates, and preparation workflows across connected users.
 - Ran usability and A/B testing during live rehearsal sessions, refining workflows to improve coordination accuracy and task completion.
 - Exploring MCP-assisted integrations with Spotify and Google Calendar to support synchronized rehearsal preparation, scheduling, and coordination workflows.
- **Technologies:** React, TypeScript, Socket.IO, REST APIs, Figma, HCI, Usability Testing, A/B Testing, MCP, Spotify API, Google Calendar API

AI and the Future of Education | Reflective Thematic Analysis | University of Illinois at Chicago | [Findings](#) | [Paper](#)

Explored how AI in education reveals both what people hope learning can become and what they fear losing. Found that while some view AI as expanding access and improving learning experiences, others see it as a threat to fairness, human connection, and the role of effort in learning.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Tailwind CSS, GraphQL, Socket.IO, Chart.js

AI & Tooling: GitHub Copilot, Prompt Engineering, Specification-Driven Development, LLM API Integration, MCP

Data & Infrastructure: PostgreSQL, Supabase, Firebase, MongoDB, AWS, Docker, Kubernetes, GitHub Actions, Netlify

Security & Testing: RBAC, Input Validation & Sanitization, Rate Limiting, JWT, OAuth2/OIDC, Jest, Usability Testing, A/B Testing, Lighthouse

Design & Research: Figma, Wireframing, HCI, User Interviews, Reflexive Thematic Analysis
