PROFESSIONAL EXPERIENCE

UI Health | Full-stack Engineer | Chicago, IL, USA

Sept 2025 – May 2026

- Led end-to-end development of a centralized medical event platform, scaling to 1000+ daily active users during peak event periods.
- Rebuilt 20+ legacy HTML/PHP pages into a React and Next.js SPA, introducing reusable UI components across five product modules, cutting page load time by 40% and improving code maintainability.
- Reduced redundant API calls and improved rendering speed using TanStack Query, lazy loading, and memoization for Chart.js dashboard computations, cutting response time by 30%.
- Built backend services and REST APIs in C# and .NET, including a mapping and transformation layer that unified attendee data from residency, hospital, and admin systems, reducing data mismatches, and used Redis to cache the unified output, avoiding repeated rebuilds on every request.
- Migrated legacy SQL queries to Entity Framework Core, reducing query related bugs by 20% and improving maintainability and scalability.
- Deployed the platform on AWS, using EC2 for the application layer, RDS for reliable PostgreSQL hosting, S3 for event document uploads, and Lambda to process files on upload.
- Improved production reliability and release speed with Jest unit tests, peer code reviews, CloudWatch monitoring, and CI/CD pipelines using Git and GitHub Actions, and wrote Dockerfiles to containerize platform services, cutting production bugs by 25%.
- Used Claude Code and custom AI workflows to improve code quality & debugging, cutting feature turnaround time from 2 weeks to 4 days.

LPS Health | Frontend & Workflow Lead | Internship | Chicago, IL, USA

May 2025 – Aug 2025

- Rebuilt a legacy healthcare platform in 3 months as the sole developer, using React, Tailwind CSS, Node.js, and PostgreSQL to power personalized mentor recommendations, wellness plan purchases, and community initiatives across 2 brands.
- Integrated Stripe webhooks to purchases and subscription events, ensuring payment status stayed reliably in sync between Stripe and the platform.
- Raised Lighthouse scores from 40 to 80 and cut load times by 70%, through lazy loading, image optimization, and caching.
- Used Google Analytics insights to guide SEO improvements across health articles and campaign pages.
- Sped up development across 2 brands by building a design system of 10+ reusable components with standardized design tokens.
- Improved API reliability and scalability by adding pagination, caching, SQL optimization, and rate limiting to core REST APIs.
- Improved reliability and release speed by integrating Sentry for error tracking, reaching 80% Jest coverage, and setting up CI/CD through Netlify.

Oracle | Cloud Analyst (Technical Consultant - Frontend) | Bengaluru, Karnataka, India

Aug 2022 – June 2024

- Became an early Oracle VBS specialist by mastering a new cloud B2B platform with limited documentation, contributing across two teams.
- Worked directly with client stakeholders (BHE) to translate business workflows into production user experiences.
- Sped up development by delivering 20+ reusable Oracle VBS components with documented usage patterns, adopted across 4+ modules by cross-functional teams of 10 to 20 developers, QA engineers, and consultants.
- Solved undocumented business requirements by designing workarounds and publishing knowledge articles that let other teams reuse the solutions.
- Improved data consistency by architecting an OCI-hosted REST middleware that synced data between BHE systems and Oracle Fusion Cloud across 10+ integrations.
- Restored critical business workflows by resolving 100+ production issues across frontend, middleware, and API layers during Agile cycles.

EDUCATION

University of Illinois at Chicago | Master's in Computer Science, Chicago, IL, USA

Aug 2024 – May 2026

Human Computer Interaction, UI/UX Designing, Software Engineering, Secure Web App Development

9.3 GPA

BNM Institute of Education | Bachelor's in Computer Science, Bengaluru, India

Aug 2018 – July 2022

OOPS, DBMS, Computer Architecture, Computer Organization, Data Structures & Algorithms

9.28 GPA

PROJECT

Cue - Collaborative Music Rehearsal Platform | Product Engineer | University of Illinois at Chicago | [Live Project](#) | [Github Repo](#)

- Conducted user interviews & competitor research to identify coordination, communication and other challenges faced by performers and organizers.
- Synthesized research into design principles, personas, user journeys, and prioritized product requirements.
- Designed the information architecture, navigation, and role-based workflows with clear hierarchy, feedback, and error prevention.
- Created and iterated on sketches, wireframes, and high-fidelity responsive prototypes with consistent interaction patterns.
- Evaluated key flows through cognitive walkthroughs, improving learnability, discoverability, efficiency, and accessibility.
- Designed, prototyped, and built the product using Figma, React, Supabase, and AI-assisted development workflows.

SKILLS

Languages: JavaScript (ES6+), TypeScript, C#, Python, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, .NET, Entity Framework, Node.js, Express.js, Tailwind CSS, Redux, MUI, GraphQL, Socket.IO, Chart.js

Data & Infrastructure: PostgreSQL, Redis, Supabase, Firebase, MongoDB, AWS (EC2, Lambda, S3, RDS), Docker, Kubernetes, CloudOps, CloudWatch, Git, GitHub Actions, Netlify, OCI, CI/CD

AI & Tooling: Claude Code Sonnet 5, OpenAI Codex GPT-5, MCP, Specification-based Development, Rapid Prototyping, AI-assisted UX Iteration

Architecture & Systems: REST APIs, Microfrontends, Event-driven Architecture, Distributed Systems, State Management, Real-time Systems

Testing & Reliability: Jest, Sentry, Unit Testing, End-to-end Testing, Lighthouse, Cross-browser Testing, A/B Testing, Debugging

Security: RBAC, JWT, OAuth2/OIDC, Session Management, Input Validation & Sanitization, Rate Limiting, API Security

Design & Research: Figma, Design Systems, Design Tokens, Interaction Design, Information Architecture, Accessibility, Usability Testing
